

## Is your IT Infrastructure performing at its optimum capacity? - [click here to find out more](#)

Datamerge's comprehensive asset analysis gives our customers a clear schedule of the lifecycles of all the elements of their network including servers, workstations, IT peripherals, and Telephone systems. Through this we are able to plan all upgrades and replacements that need to be made, enabling better budgeting and allocation of your business resources

Datamerge will help you plot your path to the future taking into consideration your existing infrastructure investment. It is vital that solutions deliver financial and performance benefits today, while ensuring commercial and technical advantages into the future.

Once we understand your business plan and objectives we will develop a technology plan that includes a timeline that details what needs to be done and when to keep your IT and Communications systems up to date and delivering maximum benefit to your business.

Just as important, we will provide you with budget estimates for all of your IT needs now and into the future so that you can budget for future capital expenditure.
